EXPERIMENT-7 PREDICTIVE PARSING

Aim: A program for Predictive Parsing

Algorithm:-

```
1. Start the program.
2. Initialize the required variables.
3. Get the number of coordinates and productions from the user.
4. Perform the following
for (each production A → α in G) {
for (each terminal a in FIRST(α))
add A → α to M[A, a];
if (ε is in FIRST(α))
for (each symbol b in FOLLOW(A))
add A → α to M[A, b];
5. Print the resulting stack.
6. Print if the grammar is accepted or not.
7. Exit the program.
```
